netlogix: Microsoft and cloud partner

"As a Microsoft partner with a gold competency in Cloud Productivity, we have a wealth of experience in providing cloud and hybrid Office 365 solutions for corporate customers. Our extensive knowledge on cloud services and specific Microsoft provisions guarantees we always provide the best possible solutions for the individual requirements of our customers."

Stefan Saffer, Consultant | netlogix IT-Services

netlogix completes first project with Exclaimer in the German cloud

netlogix has become the first Exclaimer Partner in Germany to complete an Exclaimer Cloud project for a customer with an Office 365 Germany tenant. The company was responsible for the complete service: from advising on the cloud strategy, completing the migration and the customer support. netlogix' customer had already been using Exclaimer's on-premises solution, Exclaimer Signature Manager Exchange Edition. When the customer migrated to Office 365, the opportunity arose for netlogix to introduce it to Exclaimer Cloud - Signatures for Office 365.

All technical requirements and questions for future support were addressed beforehand as part of the joint project planning. It was also verified whether it was possible to replicate existing signature rules or whether they had to be adapted.

Benefits of the Exclaimer Cloud solution

The Exclaimer Cloud solution is more flexible, scalable and easier to manage than Signature Manager Exchange Edition as no local installations are required. All signatures are controlled via a web-based user interface. Continual service improvements ensure a first-class user experience.

The licensing follows the Office 365 model with subscriptions per user per month.

Exclaimer Cloud is available via datacenters in various regional locations

Regional datacenters do not just offer low latency and high reliability; they also help Exclaimer's customers who face particularly strict compliance requirements. The availability of the Exclaimer Cloud service via the Azure datacenters in Frankfurt and Magdeburg for German customers ensures that their data never leaves Germany. Coupled with the ISO 27001:2013 Certification, Exclaimer Cloud customers are assured that the service offers the highest levels of security, data protection, and compliance.

Project implementation: seamless migration into the cloud

For this project, the Microsoft Azure datacenters in Germany were used. In order for emails to be sent via the German Cloud, Office 365 connectors were configured during the setup process. With the use of these connectors and setting up a transport rule, mail flow would be directed from Office 365 to the regional Azure servers where the Exclaimer Cloud service resides. At this stage, the signatures would then be added to all emails and sent back to Office 365 for sending as normal.

The migration from Signature Manager Exchange Edition to Exclaimer Cloud was seamless, ensuring all employees continued to receive consistent signatures on their emails when sending from any device. After netlogix had successfully transferred all of the client's inboxes, mail flow and client access would now run via the cloud.

netlogix: Exclaimer is the perfect add-on for Exchange and Office 365

"netlogix has been an Exclaimer Partner for eight years and has successfully completed more than 100 projects with Exclaimer software."

Exclaimer is the perfect add-on for Exchange and Office 365 because the methods available for manually managing signatures within the Microsoft environment are simply not sufficient for most customers. With Exclaimer solutions, we can offer products that cover all signature requirements and are easy-to-setup at the same time.

In addition, quick lines of communication with our Exclaimer Account Manager and competent technical support ensure we have an excellent partnership with Exclaimer."

Jochen Griebel, Sales Director | netlogix IT-Services
