Downloading

Please refer to the following link on the Exclaimer website:

<http://www.exclaimer.com/signature-manager-office-365-edition/download>.

Installing

Download and run the 'Signature Manager Office 365 Edition 1.0.7' installation file 'setup.exe'. An MSI is available from support by contacting support@exclaimer.com.

Uninstalling

Uninstall can be achieved via the 'setup.exe' or MSI for the currently installed version of 'Signature Manager Office 365 Edition' or via 'Programs and Features' in your Windows operating system.

The configuration files are located in **\ProgramData\Exclaimer Ltd\ Signature Manager Office 365 Edition** and will not be removed as part of the uninstall process.

The uninstall process will not lose any of your configuration or settings. However, as a backup precaution, you may wish to export your configuration.

Export Steps

1. Open the Exclaimer Console.
2. Select the 'Exclaimer' node.
3. Open the 'Action' menu.
4. Select 'Export Configuration...'
5. Select a location and filename for the export.
6. Press Save.

This will export all your settings including all your templates and licensing data.

Fixed Issues

- Problem: The time settings of the 'Generate new signatures every x minutes' had no effect on signature generation frequency.
Resolution: The value entered into the 'Generate new signatures every x minutes' is now taken into account.
- Problem: Office 365 administration account credentials were not accepted when erroneous leading or trailing spaces added to the account name.
Resolution: Erroneous leading and trailing spaces are now removed automatically.

Enhancements

- Maintenance release updating license information.
- Support for Microsoft .NET Framework 4.7.1 and .NET security updates.
- Improved OSUA Citrix support to prevent an auto shutdown after first run in specific scenarios.
- Ability to set a default OWA signature on replies or forwards
Please note that a one-signature limit in OWA still exists and this feature will not deploy additional signatures.
- Extended event viewer logs when OSUA is unable to connect to O365.
